DWELL STEALTH — SMOKE EXTRACTION SYSTEM

THE KITCHEN UNDISTURBED

India's longest and most powerful chimney range.

Some things should work without asking for attention.

A kitchen is never just a kitchen. It's where a Sunday starts late and ends slow. Where a mother teaches a recipe she never wrote down. Where two people, after a long week, find themselves standing shoulder to shoulder over a single pan, talking about nothing important — and everything that matters.

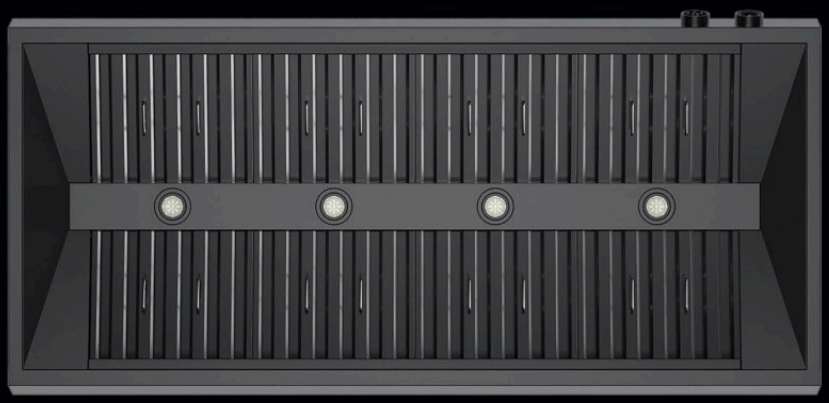

Dwell Stealth — smoke extraction system was built for that room. To make everything else in it more enjoyable: drawing away smoke as spices meet the pan, clearing steam when the lid is lifted, and keeping the light warm long after the stove goes cold.

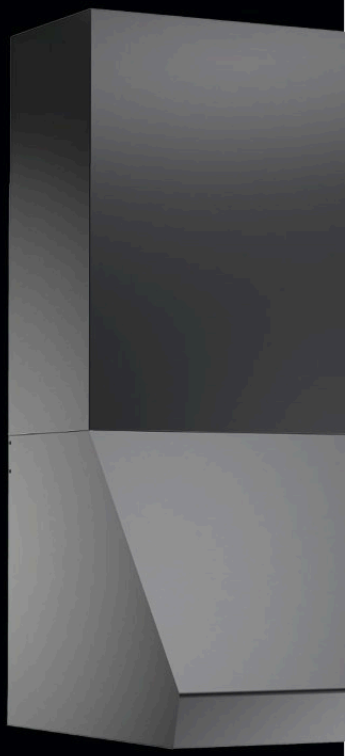

That's the quiet job of a smoke extraction system: to work so naturally in the background that what you notice is what it gives you back. Clearer air, an uninterrupted conversation, and the pleasure of lingering over a meal you've just made. The engineering matters most when you no longer have to think about it.

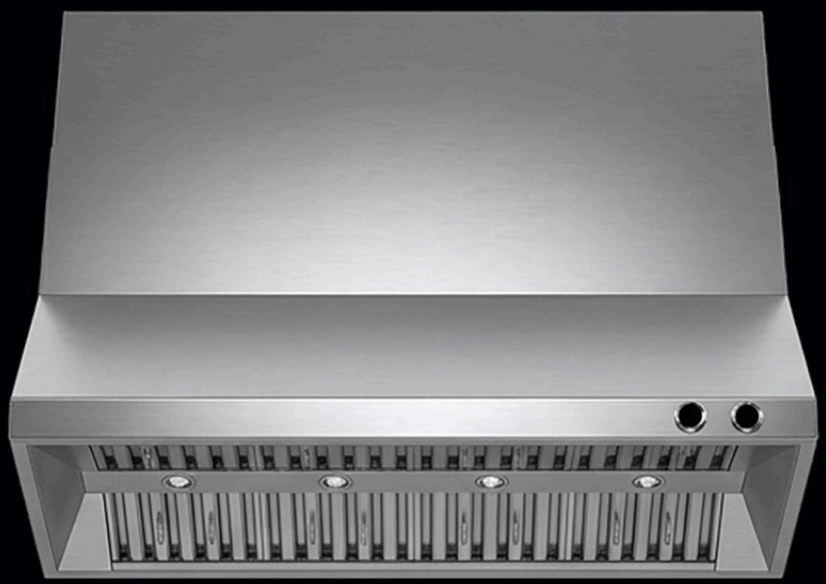

At the heart of the Dwell Stealth wall collection is one idea: effortless control. A single knob for airflow, a single knob for light. Nothing to navigate, nothing to configure, nothing standing between you and the meal.

"UL 507 and CSA C22.2 certified for safety you don't have to think about — so you can focus on the cooking, not the ceiling."

One material.
Two expressions.

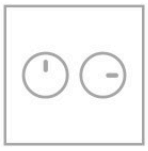

Stainless steel — A light-catching presence that sits beautifully alongside natural stone and warm timber.

Black-finished stainless steel — A striking contrast in lighter spaces, a composed presence in darker interiors.

Technology, at a Glance

Dual rotary controls
One knob for smoke. Another for light.

Three extraction speeds
The setting you need, as the cooking changes.

Dimmable LED lighting
Light over the hob, adjusted to the moment.

Five-minute delayed shut-off
Extraction continues after you've stepped away.

Removable baffle filters
Designed for extraction, accessible for cleaning.

Oil drainage channel
A dedicated route for collected grease.

UL and CSA certification
Safety standards behind the everyday assurance.

DWELL
AIR

Control that comes naturally.

Dual rotary controls

Some things feel right the moment you reach for them. Dwell Stealth's two rotary knobs bring that familiarity to extraction: a turn of the hand, a small adjustment, an immediate response.

One knob selects the airflow; the other sets the light. There is nothing to navigate or configure, so your attention stays with what is happening in the pan. It's a classic gesture, refined for a modern smoke extraction system—and the kind of control you soon stop thinking about at all.

Quietly taking care of the details.

Three extraction speeds

A gentle simmer and a hot pan ask for different levels of extraction. Three speed settings let you make that adjustment with a turn, keeping control close to the way you cook.

Five-minute delayed shut-off

The cooking may be finished before the air has cleared. Select the delay and extraction continues for five minutes, then switches off on its own. If the light is on, it stays on for you.

Removable baffle filters

The baffle filters are designed for a straightforward pull-and-slide removal. When it's time to clean them, a working part of the system is easy to reach and simple to return to place.

Certified safety

The Dwell Stealth wall collection conforms to UL Standard 507 and carries CSA certification. Reassurance built into the product, so it can remain comfortably in the background.

DWELL STEALTH 900

For the pleasure of everyday cooking.

Good engineering belongs in kitchens of every size. Proportioned for apartment kitchens and family galleys, Dwell Stealth 900 draws smoke and steam away from the hob without dominating the room. Familiar rotary controls keep things simple, so your attention stays with the cooking—and whoever has joined you.

DWELL STEALTH 1200

For the rhythm of family cooking.

Larger family kitchens often have several things happening at once. Dwell Stealth 1200 is proportioned for wider cooking surfaces, with two extractor fans to draw away smoke and steam as the meal comes together. From a quick weekday supper to a long Sunday lunch, it keeps extraction comfortably in the background.

DWELL STEALTH 1500

For cooking on a larger scale.

For the cook who enjoys the preparation as much as the meal, Dwell Stealth 1500 offers the collection's most generous wall-mounted form. For the serious home cook and the open-plan chef's kitchen, Dwell Stealth 1500 is our flagship. As India's longest kitchen chimney for the home, it brings an expansive canopy and twin extractor fans to the range that anchors the room. Generous in scale and simple to control, it lets you give the meal your full attention.

DWELL STEALTH ISLAND 1500

Where cooking takes centre stage.

In an open-plan kitchen, an island hob lets the cook face the room and stay part of the conversation. Dwell Stealth Island 1500 brings extraction directly above that cooking space, suspended from the ceiling. Its generous canopy can be appreciated from either side, with a defined form and two rotary controls on the front face. Its clean form sits naturally at the centre of a room shared by cooking, dining and company.

DWELL STEALTH BUILT-IN 900

Discretion, by design.

Dwell Stealth Built-in 900 suits kitchens where uninterrupted lines are central to the design. Concealed within an overhead enclosure, its main body stays out of view while the working face sits above the hob. It brings smoke extraction into the cooking area with a discreet presence that respects the room around it.

DWELL KITCHEN SPLIT CHIMNEY FAN

More power for the chimney you already own..

An external add-on for any ducted kitchen chimney, whatever the brand. Designed to double suction, the Dwell Kitchen Split Chimney Fan connects to the existing duct and mounts on an exterior wall or terrace. Its German ebm-papst motor adds extraction power from outside the cooking space.

Greater reach.
Lasting assurance.

Longer duct routes
Duct reach of up to 76.2 m.

Independent operation
Can operate while the chimney's internal fan is off.

Resistance to grease build-up
High-velocity blades help limit grease accumulation.

Built for sustained use
40,000-hour bearing rating and IP65-rated protection.

1500 m³/h capacity · 210 W · 2500 r/min · 58 dB

External wall or terrace mounting.
